

Faststone Photo/Image Resizer Directions Website: <http://www.faststone.org/FSResizerDetail.htm>

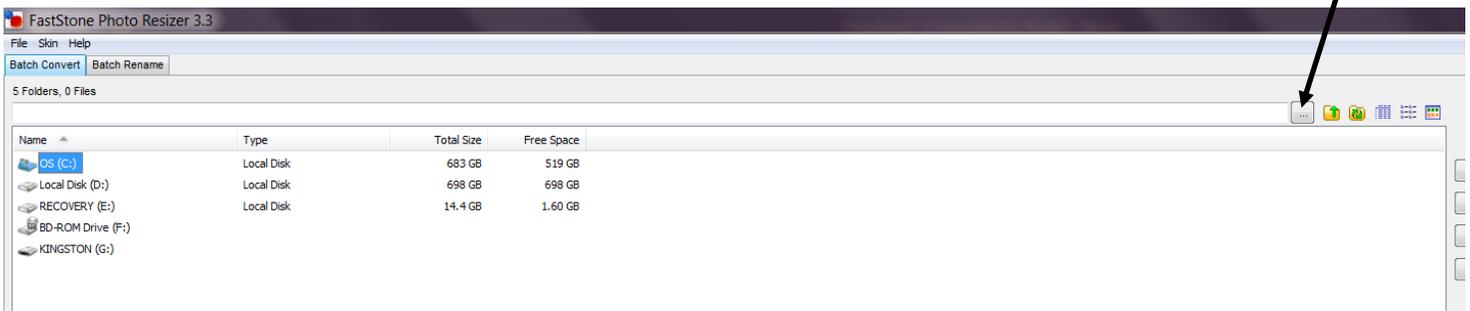

Download the file and run the install. (bottom of back page shows the current file)

Once installed **you need to know where your photos are stored:** “My pictures” file or where you have them stored.

Now open Faststone Image Resizer—you will see this screen:

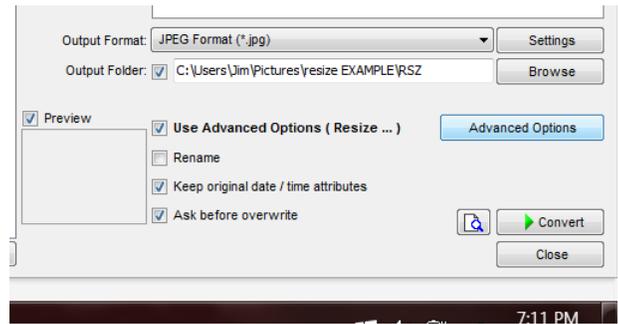

You need to direct the program to the files you want to resize. You can type that on the line or click on this box and direct the program to your photos.

Now select the photos you want to add- they will show up in the little preview box. And will be listed in the right column.

Faststone Photo/Image Resizer Directions continued

Next Select Output Format– JPEG (default)

Next Output Folder (check) and tell the program where you want the photos to go- I typically just add a new folder directly beneath the input folder (file you got your pics from). You can always add a “Photos to send” folder to their desktop. **I DO NOT recommend you put them in their original input folder.**

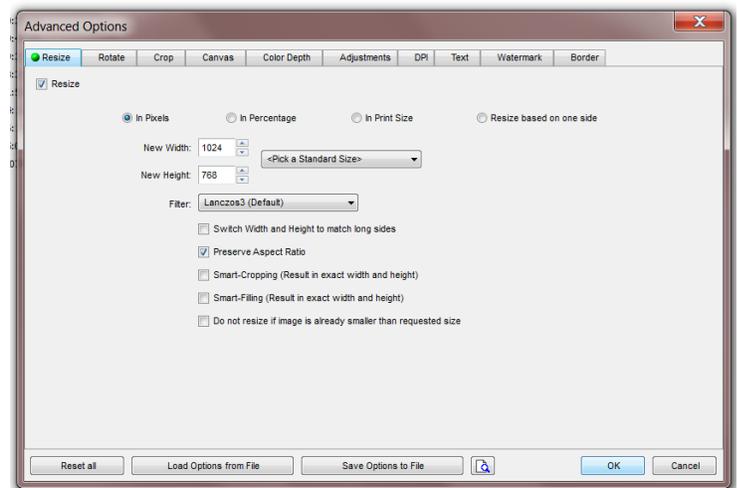

Next

Click on the Use Advanced Options (Resize...)

tab and select **1024 x 768 size**.

Now you just click **Convert**

Before closing the program I recommend you make sure the photos ended up where you intended.

There are a number of YouTube video that demonstrate the program.

None are great, but here are a couple: <https://www.youtube.com/watch?v=nUHx7tgfmHE>

FastStone Photo Resizer

[exe download](#)

[portable download](#)

Note:

exe
A single executable file that installs the application in your computer. **Recommended for most users.**

zip
A zip (compressed) format of the exe file above. In some networks, downloading exe files is strictly prohibited. If you are using such networks, download the zip file instead. After the download, just unzip it to get the exe file (installer).

portable
A zip (compressed) file that includes all the required files to run the application independently from any folder you dump it in. Major advantage is that you can carry it around on a memory stick / USB flash drive, or copy / migrate from PC to PC via simple copying of files. No installation is necessary.
